

Download NFC Tools by Wakdev

How to Write a Spotify Playlist to your Mix Tape

Step 1: Copy Your Spotify Playlist Link

1. Open the **Spotify** app on your phone.
2. Navigate to the playlist you want to link.
3. Tap the **three dots (...)** menu icon near the playlist title.
4. Select **Share** and then tap **Copy link** (or "Copy link to playlist").

Step 2: Set Up NFC Tools by Wakdev

1. Open the **NFC Tools** app by Wakdev.
2. Tap on the **Write**.
3. Select **Add a record**.
4. Choose **URL / URI** (Add a URL record).
5. **Paste** your copied Spotify playlist link into the text field.
6. Tap the **Check** button in the upper right to save.

Step 3: Write to the NFC Tag

1. Tap the **Write / Write to tag** button in the app.
2. A prompt will appear saying *"Ready to write, hold your device to an NFC tag"*.
3. Tap your NFC card against the back of your phone and hold it steady until you see a confirmation message.

How to Write a Payment Link to your Mix Tape

Step 1: Set Up NFC Tools by Wakdev

1. Open the **NFC Tools** app by Wakdev.
2. Tap on the **Write** tab at the top of the screen.
3. Select **Add a record**.
4. Choose **Payment link**.
5. Select **EDIT** and choose your Payment app
6. Enter your **Account** username
7. Enter a default dollar amount or comment (*Optional*).
8. Tap **Check** button in the upper right to save.

Step 2: Write to the NFC Tag

1. Tap the **Write / Write to tag** button in the app.
2. A prompt will appear saying *"Ready to write, hold your device to an NFC tag"*.
3. Tap your NFC card against the back of your phone and hold it steady until you see a confirmation message.

If you are adding a Payment Link, it is highly recommended to lock the tag. Locking the tag prevents any changes to the tag.

WARNING! Locking the tag can not be undone. Once the tag has been locked, you can no longer edit or erase the tag.

OPTIONAL:

You could set a password on the tag that will prevent any changes until the password is removed. This is useful because it avoids a permanent lock of your NFC tag and prevents writing if the password hasn't been removed before.

Both these options are found in the **Other** section in NFC Tools app

- Open the **NFC Tools** app.
- Tap on **Other**.

How to Erase your Mix Tape Tag

1. Open the **NFC Tools** app.
2. Tap on **Other**.
3. Select **Erase tag**.
4. Hold your NFC card against the back of your phone until the app confirms that the tag has been successfully wiped.

How to Scan an NFC Tag

HOW TO SCAN AN NFC TAG

SAME TAG • TWO PHONES • EASY STEPS

iPhone (iPhone 7 and later)

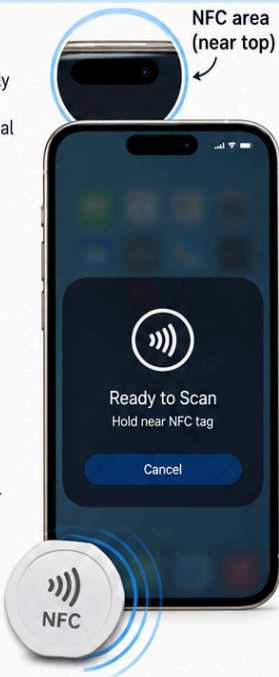

- 1 Open the NFC feature**

iPhone NFC works automatically for many apps (like Apple Pay, Shortcuts, and more). No special settings needed!
- 2 Find the NFC location**

The NFC antenna is near the top of your iPhone, just below the camera (varies slightly by model).
- 3 Hold your iPhone near the tag**

Place the top of your iPhone close to the NFC tag (usually within 1–2 cm / ½ inch).
- 4 Wait for a response**

Your phone will vibrate, show a notification, or open the app/link associated with the tag.

Android (Most devices)

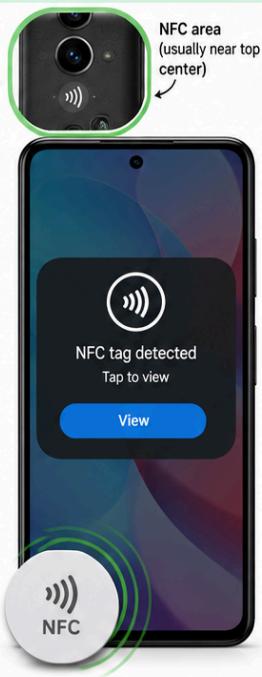

- 1 Turn on NFC**

Go to Settings > Connected devices (or More connections) > NFC and make sure it's turned on.
- 2 Find the NFC location**

The NFC antenna is usually on the back of your phone, near the top center (or varies by model).
- 3 Hold your Android phone near the tag**

Place the back of your phone close to the NFC tag (usually within 1–2 cm / ½ inch).
- 4 Wait for a response**

Your phone will vibrate, show a notification, or open the app/link associated with the tag.

QUICK TIPS

- Remove thick cases if you're having trouble.
- Keep the phone steady for a second or two.
- If it doesn't work, try adjusting the position slightly.
- Different phones and apps may behave slightly differently.
